

But you surely want to use data within  
components, not only routes? 🤔

But you surely want to use data within  
components, not only routes? 🤔

# Custom data hook

```
export function useAwesomeLoaderData() {  
  const data = useRouteLoaderData("awesome") as LoaderData;  
  if (data === undefined) {  
    throw new Error("useAwesomeLoaderData must be used within the  
    Awesome route or its children");  
  }  
  return data;  
}
```
