

Where we are

- Some routes already use new data loading
- Slowly adjusting route folder structure to [Remix recommendation](#)
- Using openapi-fetch to get typed data from backend OpenAPI definitions
- Satellite Remix apps

More fun 🤗

- No need to worry about stale data
- Easily add small things that really boost UI/UX
- Control of the data flow
- (Better) Types for API responses

```
useEffect(() => {  
  const interval = setInterval(() => {  
    // only poll if we have submitted steps,  
    // otherwise we need to take action first on the partner side  
    if (revalidator.state === "idle" && hasSubmittedSteps) {  
      revalidator.revalidate();  
    }  
  }, POLLING_INTERVAL);  
  return () => clearInterval(interval);  
}, [revalidator, hasSubmittedSteps]);
```
