

# Status Quo 09/22

## ZPC – Zolar Project Center

- Grown backoffice software
- React SPA with react-router@5
- Webpack
- axios for network requests (no types)
- Global Redux for state handling

# Why change this?

- No direct control over data fetching, dispatch to Redux
- Custom data revalidation on mutations
- Stale data... maybe? 🤔
- Global Redux had turned into quite a beast
