Merged in ZPCDEV-2424-enable-loader-action-router (pull request #1333)

edac3ae · 2 builds · Author: Markus Siering · Closed by: Majdi Abusaleh · 2023-01-16

Description

- ZPCDEV-0 chore: switch router setup to enable loader/action methods for routes
- ZPCDEV-0 refactor: wrap everything in the MainContainer

So. Much. Fun!

Bartosz Liebek 2022-11-10

Testing this again will make QAs cry 🙂 and it will cause tons of merge conflicts 🙂

To quote the ticket:

> This only switches some underlying basic router setup from relying on JSX magic to calling an actual function. Tests and interface rendering are not affected by this.

In theory, yes 🙂 but I think full regression needs to be run. And if QA hear "another router update" they'll get a whole bunch of grey hair 😄
